

Veeam Data Platform Essentials

Leading the Way in Small Business Data Protection

Veeam Data Platform Essentials delivers powerful, easy-to-use, and affordable backup, recovery, monitoring and reporting for up to 50 virtual, physical, and cloud workloads — all from a single platform. Veeam Data Platform v12.3 is leading the way in data protection through cloud-based identity and access management (IAM) with Veeam Backup for Microsoft Entra ID to keep your business running, while mitigating cyberthreats, cyber attackers, and even human error.

Cyberattacks are targeting your data protection platforms and backups. The Veeam 2024 Ransomware Trends report noted that 96% of backup repositories are targeted during ransomware attacks, clearly showing that backup data is also an encryption target during cyberthreats. As such, more must be done to ensure that backups — a company's best and often last line of defense — remain protected. Veeam Data Platform Essentials protects more than just VMware, we also protect Proxmox VE, Nutanix AHV, and Hyper-V so that organizations like yours can rest easy knowing their data is secure.

Challenge

IT pros find it difficult to balance the complexities of IT infrastructure modernization due to smaller team sizes, shrinking budgets, and reduced resources.

Effortless Data Protection

Our powerful defense system ensures your backups are safe from unauthorized access, encryption, or deletion for their entire lifecycle. No more babysitting your backups — recover the data you need anytime, anywhere.

Freedom and Flexibility

Integrates seamlessly with existing IT infrastructure and cloud environments, while utilizing the Veeam Universal License (VUL) model for reallocation of data protection resources as your business needs evolve.

Process Made Simple

Straightforward data protection without compromise, making it easy to deploy, monitor, and manage data protection operations.

Key Capabilities

Guarantee Survival

Our powerful defense system ensures your backups are safe from unauthorized access, encryption, or deletion for their entire lifecycle.

Put the Spotlight on Malware

Highlight threats, identify risks, and measure your environment's security score in the Veeam Threat Center.

Automate Fixes for Backup Issues

Eliminate the need for manual alarm responses by setting up automated, self-healing, and policy-based fixes for common backup and infrastructure-related issues.

Confidently Recover

Boost your recovery confidence with automated scans using the Security & Compliance analyzer — use best practices for infrastructure hardening and data protection.

Know Your Protection Status

Generative AI insights from your environment help navigate complex questions, uncover gaps, and ensure compliance.

Tools Scanning

Expand the hunt for IoC tools in your backups and mitigate attacks by identifying and responding to known software threats and data exfiltration tools.
